SUMMARY

Product Designer and UX Design Engineer with 7+ years of combined UX/UI, web, and software experience, including enterprise product work at General Motors. Leads complex products from user research, contextual observation, and problem definition through journey mapping, prototyping, usability testing, iteration, and production implementation. Combines user-centered design with deep engineering fluency to translate user needs, business goals, and technical constraints into intuitive, scalable product experiences.

SKILLS

Product Strategy & Discovery

Product discovery, problem definition, user research, stakeholder interviews, requirements discovery, user journeys, workflow mapping, information architecture, data-informed product decisions

UX & Interaction Design

Wireframing, high-fidelity prototyping, interaction design, usability testing, design iteration, responsive UX/UI, accessibility, data visualization, Figma, Adobe Creative Cloud

Design Systems & Engineering

Reusable UI components, interaction patterns, component architecture, React, Angular, TypeScript, JavaScript, HTML/CSS, REST APIs, design QA, documentation

Collaboration & AI

Cross-functional product collaboration, stakeholder alignment, design reviews, engineering partnership, mentoring, conversational UX, AI prototyping, Claude Code, GitHub Copilot

PROFESSIONAL EXPERIENCE

General Motors

Software Engineer - UX/UI & Design Engineering Focus | Jan 2023 - May 2026 | Michigan

- Led end-to-end product design for complex enterprise tools, from discovery and problem definition through prototyping, usability validation, iteration, and production implementation.
- Conducted user research through direct employee conversations and contextual observation, studying how users navigated legacy systems to uncover pain points, workflow inefficiencies, technical constraints, and opportunities for improvement.
- Translated research findings into user journeys, workflow maps, wireframes, and high-fidelity Figma prototypes, using insights from real user behavior to guide interaction and product decisions.
- Facilitated prototype reviews with users, stakeholders, and cross-functional partners; gathered feedback, iterated on designs, and tested revised experiences to validate usability before and throughout implementation.
- Designed reusable interaction patterns for dashboards, maps, calendars, forms, dense data tables, and guided workflows, advocating for accessibility, consistency, scalability, and maintainable implementation.
- Partnered closely with developers, product/project managers, designers, and stakeholders throughout delivery, balancing user needs, business requirements, and technical constraints while maintaining design quality through implementation.
- Participated in cross-functional post-launch retrospectives with designers, developers, stakeholders, and project managers to evaluate outcomes, identify delivery challenges, capture lessons learned, and improve future product and design processes.

SELECTED GM WORK

Broadcasting Services

- Led discovery and UX redesign of an enterprise event-management platform, mapping administrator and stakeholder workflows to identify friction across scheduling and approval processes; iterated on calendar and approval experiences supporting executive events with 1,000+ attendees.

TAD | Firewall Requests

- Helped centralize and redesign a fragmented request journey that historically took up to two months. Combined process design, API/service integration, conversational assistance, and automation as the team drove turnaround toward a two-day target.

SELECTED GM WORK CONTINUED

ASA | Network Operations

- Mapped complex network-operations workflows and user needs across nodes, groups, objects, IPs, and devices, translating technical requirements and cross-source comparisons into intuitive information architecture, data-rich views, and automated workflows.

Gamified Learning Platform

- Spearheaded end-to-end design and frontend development (Angular/React) for an enterprise employee engagement platform, driving a 68% increase in course engagement and active platform usage.
- Live Video Streaming Workflows: Designed interactive live-video streaming workflows within the learning platform that achieved an 85% spike in viewership, with over 50% audience retention throughout the entire broadcast duration.

AI Electron Chatbot and Conversational UX

- Designed conversational UX and interface concepts for an enterprise conversational AI chatbot utilizing Claude Code and GitHub Copilot, resulting in a 78% surge in high-volume chat prompts within the first week of deployment.

ISE | Global Infrastructure

- Translated complex infrastructure workflows into an intuitive global experience spanning maps, IPs, servers, nodes, clusters, and dense data tables; iterated on information hierarchy and interaction patterns to balance discoverability with the detailed data technical users required.

PAST PROFESSIONAL EXPERIENCE

UX/UI and Product Development

2017 - 2023 | Selected overlapping client engagements during college and before GM

TriNetica

- Engineered end-to-end UX/UI systems and full-stack software features, translating complex business requirements into high-fidelity wireframes, user journey maps, and reusable interface patterns.
- Developed frontend and backend components using Angular, TypeScript, Java, and Python to deliver production-ready, highly buildable web experiences.

Pin Seekers Golf Club

- Designed and launched a complete brand identity alongside an end-to-end production e-commerce website and digital membership platform.
- Architected administrative and customer workflows for automated payment processing, tournament registration, roster scheduling, and secure database-backed administration.

Lincoln Financial Group

- Contributed full-stack software development to optimize data pipelines, complex relational databases, API integrations, and internal operational workflows.

Growing Minds

- Led end-to-end digital, marketing, and brand design, including building the organization's responsive website and creating cohesive multi-channel campaign assets for stakeholders and families.

All American Petting Zoo

- Designed, deployed, and maintained a high-traffic, customer-facing responsive website, consistently optimizing layout usability and content hierarchy over a multi-year client relationship.

EDUCATION

Purdue University

Bachelor of Arts (B.A.), Graphic Design & Computer Science 2022
